Abstract

How to make your graduate life successful? Becoming a scientist is quite similar to be a good hunter to get foods outside. You have to manage your min-d, health, and time all over the time of your graduate period so that you are able to find your own academic niche where new findings or ideas. This was not easy to me when I was graduate students in 1990s. I would share my knowledge and wisdom to help you become the most successful grad student you can be through this seminar.
